GeODin 8 - Software Licensing

Run GeODin 8 in a network through the software license. The software license is the smart alternative to the HASP HL NET Dongle.

Step 1: Preparations
### Registration of LicProtector313.dll / Configuration of Proxy

To perform the software licensing in the network you need to register LicProtector313.dll on every GeODin-running computer. Therefore check if the file LicProtector313.dll is located within the BIN folder of your GeODin installation - especially in case of a recent software update (GeODin 7 to GeODin 8) or of changing the license method from HASP HL Dongle to software license. If there is no LicProtector313.dll located please save it in the BIN folder (file download on http: //download.geodin.com/ driver/softwarelicense/licprotector.zip). If you had set up a proxy server, please configure it in GeODin by starting <User settings> .
Step 1: Configuration of the proxy

For Windows XP - Users:

If you use Windows XP it is necessarily needed to registrate LicProtector313.dll manually. For this purpose please save the files LicProtector313.dll **a**nd register_admin.cmd in the BIN folder of your GeODin installation (file download on http://download.geodin. com/driver/softwarelicense/licprotector.zip). Then run register_admin.cmd as an administrator by rightclicking and choosing <Run as administrator> from the context menu.

Step 1: Manual registration of LicProtector313.dll

Step 2: Select type of license
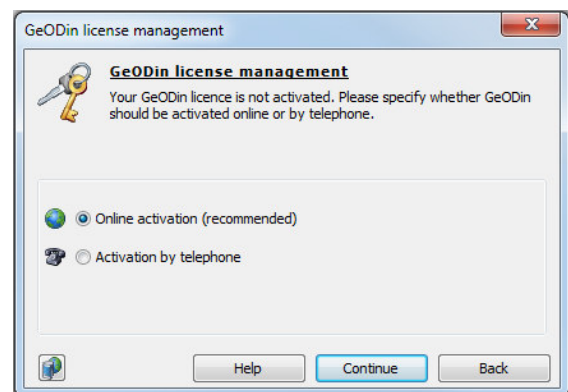

Start GeODin and have the serial number of your license available. Select - Activate new GeODin network license - and click <Continue> .
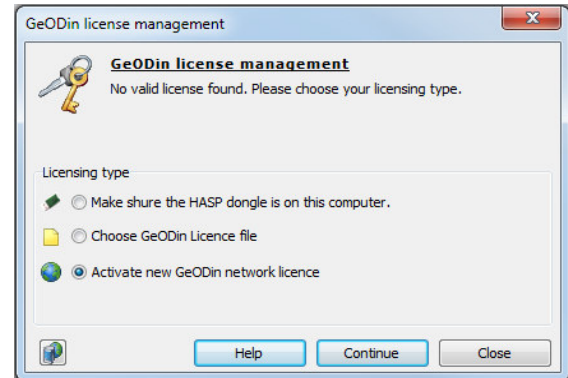

Step 2: Select type of license

Step 3: Select type of activation

Please select the recommended option -Online activation-. If an internet connection is not available select - Activation by telephone - and continue with Step 7. Click <Continue>.

Step3: Select type of activation

Step 4: Select storage location

Select a folder within your network, where you want the generated license file (geodin.lic) to be saved. Please make sure that every user of this license has write permission in this folder. Important: the UNC path must be the same for all clients having access. Furthermore the license file must not be relocated, otherwise it will expire.

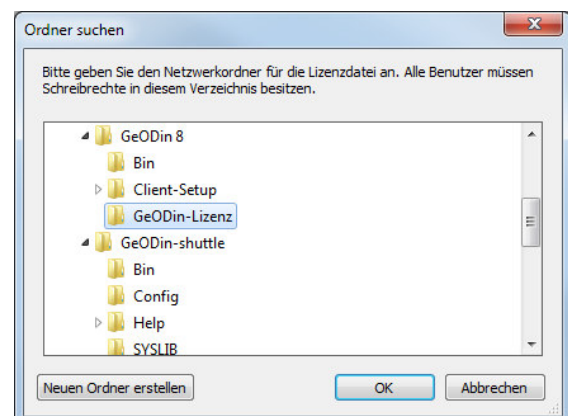

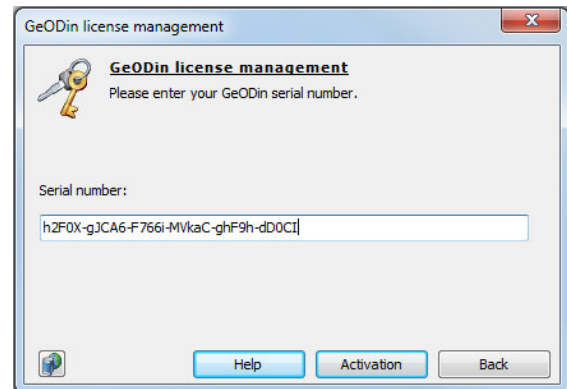

Step 4: Select storage location

## Step 5: Enter serial number

Please insert the license serial number into the dedicated input field and confirm by clicking <Activation>.

Step5: Enter serial number

Step 6: Select a license

Finally select one of the displayed licenses and confirm by clicking <OK>. If you have only one license available, you can configure an automatic activation of this license by inserting an entry into the GeODin configuration file geodin.ini. By doing so, the execution of Step 6 will not be necessary anymore, this dialog box will automatically pass through. For further information please look for „AutoLicense" in the GeODin-Help.

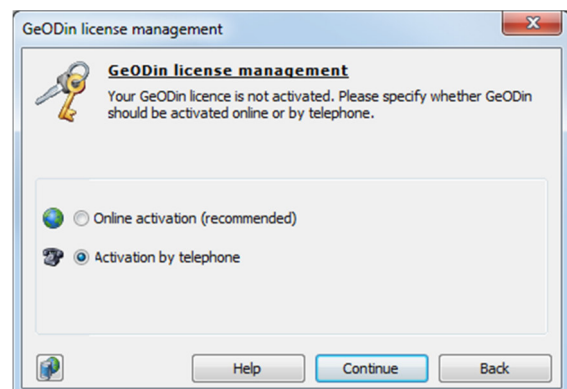

Step 6: Select a license

(optional)
Step 7: Activation by telephone

If you have selected <Activation by telephone> click <Continue> and choose the license file geodin.lic which you obtained from the GeODin Support. The file has to be saved in a folder, in which every user of the license must have write permission.

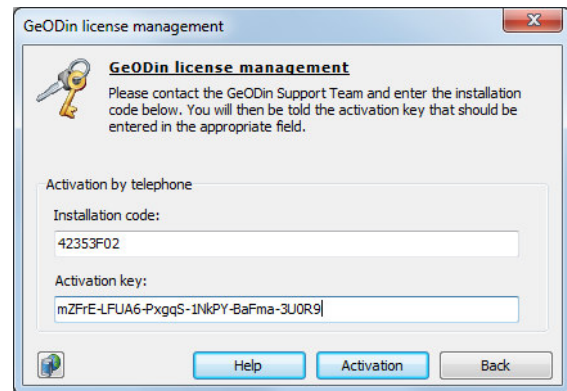

Step 7: Select type of activation

Step 8: Installation code and Activation key

Now submit the displayed installation code to GeODin Support and insert the Activation key you will obtain hereupon into the dedicated field. Continue by clicking <Activation>.

Step 8: Installation code and activation key

Step 9: Successful activation

If your GeODin license was activated sucessfully, this will be confirmed by the window you see on the right. In the next step you select one of the displayed licenses corresponding to Step 6.

Step 9: Successful activation
